

1. **Development environment:** Windows, Android Studio.
2. **Execution screen shots:**
 - (1) APISearchActivity:

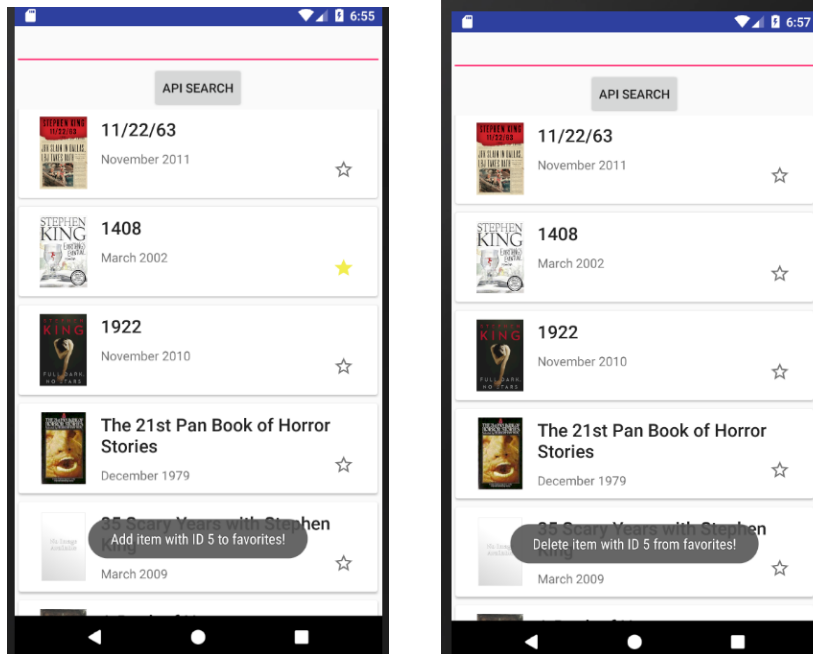

- (2) ResultDisplayActivity:

Display the user selected result information (title, text, image). And use ScrollView to show all text. Set the title of activity to the title of the book selected. Add a back button to finish the current activity and load the previous screen view.

(3) Add a result to “favorite” result:

Using SQLite to save results as “favorites”. We can use the star button to mark a result as a favorite and remove it from “favorites”.
